Hi John,

Here is a summary of points I attempted to make during today's TAC meeting (I'm the first to admit that I wasn't particularly successful but I blame the NZ time-zone :)

Demonstrate having a healthy number of committers from a diverse contributor base

All five TSC members have contributed features and bugfixes to OpenVDB over the last three months.

Have achieved and maintained a Core Infrastructure Initiative Best Practices Badge.

The CII Best Practices page is here:

<https://bestpractices.coreinfrastructure.org/en/projects/2774>

Most sections have accompanying notes to explain how they were satisfied. One of the more challenging requirements to achieve was the static analysis which is the final section, with the SonarCloud page here:

<https://sonarcloud.io/dashboard?id=openvdb>

Note that the five vulnerabilities picked up by SonarCloud are **not** medium or high security risk vulnerabilities (but are being actively discussed in the TSC).

Demonstrate a substantial ongoing flow of commits and merged contributions.

There have been 74 pull requests merged in the last three months of which I count 36 being features and bug fixes (excluding PRs related to project health, meeting notes, CII requirements, etc). I would say that every week there is on average one new feature PR and two bug fix PRs.

Document current project owners and current and emeritus committers in a COMMITTER file or similarly visible system. A copy of the project's charter (or other authorized governance document) will be included or linked to in visible location.

Current committers:

<https://github.com/AcademySoftwareFoundation/openvdb/blob/master/MAINTAINERS.md>

Emeritus committers:

<https://www.openvdb.org/about/>

Charter:

<https://github.com/AcademySoftwareFoundation/openvdb/blob/master/tsc/charter.md>

Have a completed license scan of the project's codebase.

Resolved earlier today with the following PR

<https://github.com/AcademySoftwareFoundation/openvdb/pull/492>

from SideFX that address the last remaining license issue.
